

Release 1.0 Acceptance

Product: Public Defender

Team: 6 angry men

5 June 2017

User Stories Implemented:

- As a user I want to be able to create an account so that I can use this service
- As a user I want to be able to record my interactions with police (authority) officers to hold them accountable
- As a user I want a button to signal the end of my interaction with the police to notify my community that this interaction is complete and they no longer have to participate
- As a user I want to be able to see incidents projected onto a geographical map so that I can understand where incidents occur
- As a user I want to be aware of interactions with police in my community, in order to participate in the gist of the app

Known Bugs:

- [B-01] Menu allows navigation if not signed in - leads to crashing
- [B-02] Need Location check before allowing Record or Current Events Activity
- [B-03] Current events view displays "Placeholder address here" - low priority on this one placeholder info is fine
- [B-04] Current events view displays "1m ago" no matter how long ago it was. - again low priority compared to something that causes a crash (edited)
- [B-05] Hit record, go to current events page, hit navigation bar back (not phone back or home). It will crash the recording thread
- [B-06] When installing the app for the first time, sometimes the geo request will not be made, meaning it won't be able to record/find current events. A restart solves it.
- [B-07] If you deny a permission it will exit the app properly, but upon trying to start the app again it will crash.
