

Public Defender

Installation Guide and User Manual

6_angry_men

Installation

1. Download and install [Android Studio](#)
2. Open the project from the git repository under Master:/frontend/mobile
<https://bitbucket.org/cmeps115project/115projectrepo.git>
3. Run the project through an emulator, or on an Android phone.

User Manual

Basic Instructions

Using Public Defender is easy. Upon opening the application use the Sign-In button at the bottom of the screen and login using your Google account. Once you have logged in, you will notice that the Record button is no longer blurred out, this means that you are ready to go. The Record button is the heart of our application. Whenever an interaction with a police officer happens, simply press Record and the audio will be streamed to our server for safe keeping. To stop recording, press the Stop Recording button. Even if your phone is put on stand-by, the recording will continue until you explicitly tell it to stop.

Viewing Events Nearby

Select Current Events from underneath of the Record button. This view will show you every active event in a ten mile radius. By selecting the event you can view the location on a map. Or, you can see all of the active events on the map by selecting the > button from the bottom right of the view. If at any time you would like to refresh the list and see if there are new events, or see if an event is still active, press Refresh.

Listening to Audio Files

Select My Recordings from underneath of the Current Events button. This view will present a list of the recordings that have been saved to your device and streamed to the server. By selecting one, you can listen to your audio file using your system player.

FAQs

Under the drop-down menu, select FAQs. This will display a list of frequently asked questions that might provide you with the answers you are looking for.
